

Genuine DEUTZ Parts

Did you know that in one day a piston in your DEUTZ engine travels the equivalent of the distance between Toronto and New York?*

* A piston in DEUTZ engine F4L 913 operating at 1600min^{-1} covers 576km (over 357 miles) in 24 hours when all up and down movements are added together – that's equivalent to the distance between Toronto and New York.

Important!

The engine company.

Genuine DEUTZ cylinder piston assembly for air-cooled compact engines

Genuine DEUTZ cylinders and pistons for the toughest loads

- Combustion pressure up to 125 bar
- Surrounded by gases with temperatures up to 2000 °C
- At 1600 min⁻¹ pistons and piston rings change direction 4,608,000 times in 24 hours

Safety with DEUTZ assemblies

- Perfect matching of all parts with the engine through application of knowledge from latest DEUTZ developments ensures maximum operating safety
- Perfect fit of cylinder, piston and piston rings minimises noise emissions
- Maximum cooling through gaps in cooling fins for optimal efficiency
- Optimal honing and matching of piston ring to DEUTZ specifications reduces oil consumption and prevents serious damage to engine
- Low weight of aluminium piston reduces fuel consumption
- Consistent quality through 100 % quality checks at DEUTZ and ISO 9001 standard ensures reliability

DEUTZ assemblies save you money

- Reduced fuel and oil consumption, low exhaust emissions
- Long service life
- Greater operational safety

Only genuine DEUTZ parts give optimal protection.

- | | |
|--------------------------------|--------------------------------|
| 1 Aluminium piston | 6 Groove with oil scraper ring |
| 2 Piston pin | 7 Circlip |
| 3 Cooling fins with gaps | 8 Cylinder honing |
| 4 Combustion chamber bowl | 9 Serial number and DEUTZ logo |
| 5 Groove with compression ring | |

** Incorrect honing increases wear and oil consumption.

* Low oil consumption through optimal honing to DEUTZ specifications.

Danger if non - genuine DEUTZ parts used!
